Expert advice

Artificial intelligence (AI)

Application of AI in business

What is AI?

AI (artificial intelligence) refers to the various types of software developed for the automated acquisition, processing and analysis of data.

What does AI do?

- It speeds up and optimises processes, including automatic problem solving based on the available data;
- It streamlines the performance of employees' duties.

AI in business

Services

Preparation and implementation of **in-house regulations** for the use of AI in the company;

Training for employees on, among other things, opportunities and risks associated with AI;

Analysis of the use of AI from the perspective of **intellectual property rights**;

Drafting of contracts for copyright transfer and licence agreements;

Audit of the use of AI in the company (legal and technical audit);

Audit of a project involving AI (legal and technical audit);

Legal support in any **third-party claims** related to the use of AI.

Contact

At Rödl and Partner, we go out of our way to meet our clients' expectations and offer comprehensive advice on the use of artificial intelligence in business. We offer both **legal** and **technical advice**.
